RCA Bot

Welcome to the mpmX RCA Bot! Type your questions below to interact with your process mining data.

A

**Welcome to the mpmX RCA Bot!**

I am your hybrid AI assistant for data analysis and interactive root cause analysis. Here's how I can help:

- **Deep RCA (Precomputed):** Access machine-learning generated RCA reports to find complex root cause which I will translate into business insights and recommendations.
- **Live RCA (Ad Hoc):** Select a problem, such as Lead Time Missed or Low Automation Rate, and I will perform statistical analysis and interpret the results for root causes.
- **Automated SQL Queries:** I can generate and run SQL queries against the mpmX process data if you want to double check the root causes I found.

Ask me a Question and let's get started!

Select a Live-RCA target:

- ☐ E2E Lead Time Too High
- ☐ Invoice to Payment Time Too High
- ☐ Cash Discount Lost
- ☐ SoD Violation Payment vs Invoice
- ☐ Duplicate Invoice
- ☐ Duplicate Payment
- ☐ Low Automation Rate
- ☒ Case Reworked
- ☐ Missing Payment
- ☐ Low Process Governance
- ☐ Missing Invoices
- ☐ Order to Goods Receipt Time Too High

Live RCA for Case Reworked

A

Root Cause Analysis Report: Case Reworked Issues

Executive Summary

The analysis reveals that the primary root causes of case reworked issues are related to specific invoice processing methods, item categories, and spend areas. The top contributing factors include "Invoice Processing: 3-way match, invoice after GR" and "Item Category: Service." Protective factors, such as "Item Category: Standard" and "Invoice Processing: 3-way match, invoice before GR," significantly reduce the likelihood of case rework.

Primary Root Causes

1. Invoice Processing: 3-way match, invoice after GR

- **Business Meaning:** This refers to the process where invoices are matched after goods receipt (GR).
- **Statistical Impact:** Contributes 15.14% to case reworked issues.
- **Why This Might Cause the Issue:** Delaying invoice matching until after goods receipt can lead to discrepancies and errors, requiring rework to resolve.

2. Item Category: Service

- **Business Meaning:** This category includes services rather than physical goods.
- **Statistical Impact:** Contributes 14.05% to case reworked issues.
- **Why This Might Cause the Issue:** Services often have more complex billing and invoicing processes, leading to a higher likelihood of errors and subsequent rework.

3. Spend Area: Logistics

- **Business Meaning:** This spend area covers logistics-related expenses.
- **Statistical Impact:** Contributes 12.21% to case reworked issues.
- **Why This Might Cause the Issue:** Logistics expenses can be variable and complex, increasing the chances of invoice discrepancies and the need for rework.

4. Product Class: Road Packed

- **Business Meaning:** This product class refers to

goods packed for road transportation.

- **Statistical Impact:** Contributes 8.31% to case reworked issues.
- **Why This Might Cause the Issue:** Goods packed for road transportation may have specific requirements and documentation that, if not met, can lead to rework.

5. Material Type: Indirect Material

- **Business Meaning:** This includes materials not directly used in the production process.
 - **Statistical Impact:** Contributes 7.78% to case reworked issues.
 - **Why This Might Cause the Issue:** Indirect materials may have less stringent tracking and documentation, leading to errors and rework.
-

Protective Factors

1. Item Category: Standard

- **Business Meaning:** This category includes standard items with straightforward billing processes.
- **Statistical Impact:** Reduces likelihood by 15.63%.
- **Why This Helps Prevent the Issue:** Standard items have simpler invoicing and fewer discrepancies, reducing the need for rework.

2. Invoice Processing: 3-way match, invoice before GR

- **Business Meaning:** This process involves matching invoices before goods receipt.
- **Statistical Impact:** Reduces likelihood by 15.29%.
- **Why This Helps Prevent the Issue:** Matching invoices before goods receipt can catch

discrepancies early, preventing the need for rework.

3. Spend Area: Packaging

- **Business Meaning:** This spend area covers packaging-related expenses.
- **Statistical Impact:** Reduces likelihood by 14.32%.
- **Why This Helps Prevent the Issue:** Packaging expenses are often more straightforward and less variable, reducing the chances of invoice errors.

4. Product Class: Labels

- **Business Meaning:** This product class refers to labeling materials.
- **Statistical Impact:** Reduces likelihood by 13.56%.
- **Why This Helps Prevent the Issue:** Labeling materials typically have clear specifications and straightforward invoicing, reducing the need for rework.

5. Material Type: Direct Material

- **Business Meaning:** This includes materials directly used in production.
- **Statistical Impact:** Reduces likelihood by 7.75%.
- **Why This Helps Prevent the Issue:** Direct materials are often well-documented and tracked, reducing the chances of errors and rework.

Business Recommendations

1. Implement Pre-GR Invoice Matching:

- **Action:** Adopt a policy of matching invoices before goods receipt whenever possible.

- **Priority:** High
 - 2. **Streamline Service Invoicing:**
 - **Action:** Develop standardized processes for service invoicing to reduce complexity and errors.
 - **Priority:** High
 - 3. **Enhance Logistics Invoice Verification:**
 - **Action:** Implement automated tools to verify logistics invoices for accuracy before processing.
 - **Priority:** Medium
 - 4. **Training for Indirect Material Handling:**
 - **Action:** Provide training to staff on the proper handling and documentation of indirect materials.
 - **Priority:** Medium
 - 5. **Regular Audits of Invoice Processes:**
 - **Action:** Conduct regular audits of invoice processing methods to identify and address discrepancies early.
 - **Priority:** Low
-

Key Insights

1. **Early Invoice Matching Reduces Rework:** Matching invoices before goods receipt significantly reduces the likelihood of case rework, highlighting the importance of early discrepancy detection.
2. **Service Invoicing Complexity:** The complexity of service invoicing is a major contributor to case rework, suggesting a need for simplified and standardized processes.

3. **Protective Factors Offer Guidance:** Understanding protective factors can guide process improvements, such as adopting practices from standard item categories to reduce rework in other areas.
-

This report provides a comprehensive analysis of the root causes of case reworked issues and offers actionable recommendations to address them. By focusing on these areas, management can make informed decisions to improve process efficiency and reduce the occurrence of rework.
